AVIONICS SOLUTIONS

Analytic Systems designs and manufactures a complete range of products including: Battery Chargers, Voltage Converters, Inverters, Power Supplies and Frequency Converters for Rail, Commercial and Industrial, Mobile, Military, Marine, Oil and Gas, Telecom and Alternative Energy clients worldwide.

TENSITRON®

Tensitron founded in 1935, designs, manufactures, sells, and services digital, mechanical and electronic tension measuring instrumentation. Its products are used in many different industries and companies for a variety of quality control purposes. They are the leading provider of superior precision tension meters and tension measuring instrumentation used world-wide in manufacturing and test facilities.

ACX-1 meters are the fastest, easiest way to verify accurate cable tension. Get your aircraft off the ground and into the air with maximum performance and safety, minimum cost and time.

Tensitron instruments are designed to quickly check the tension on aircraft cables from 1/16 in. to 1/4 in., CWT cable sizes from 5 to 25, and metric cables from 2.0mm to 4.0mm. Calibrations for other cable sizes are available upon request

FREEDOM

Communication Technologies

Freedom Communication Technologies, Inc. engineers, develops, and manufactures communication test equipment for the land mobile radio test equipment market.

Tel-Instrument is a leading designer and manufacturer of avionics test and measurement solutions for the global commercial air transport, general aviation, and government/military aerospace and defence markets. Tel-Instrument provides instruments to test, measure, calibrate, and repair a wide range of airborne navigation and communication equipment.

LAVERSAB

Laversab builds products and tools that increase the productivity of engineers and operators in the Aviation and Oil & Gas industries.
 Aviation: Avionics test equipment for all aircraft, including RVSM Pitot Static testers, Air Data Test Sets (ADTS), and automated calibrators.
 Oil & Gas: Certified computer systems for Hazardous Areas. Typical applications are MWD Surface Systems, Rig Floor Computers, and Depth Tracking Systems.
